The animals do not, however, die from it. In the human subject, he produced typical erysipelas after inoculation with the pure cultured micrococcus in from fifteen to sixty hours. These inoculations were made for the purpose of curing certain tumors, one of lupus, one of cancer, and one of sarcoma. Fehleisen also in several instances carried out a second inoculation successfully, within a few months. He found that a three per cent, solution of carbolic acid and a one per cent, solution of mercuric bichloride destroyed the vitality of these micrococci. That the material is also capable of being transmitted through the air, and of fixing itself upon wounds or abraded places, is proved by the strongest possible circumstantial evidence. This being admitted, the problem of prevention resolves itself into that of exclusion of...
